### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. This application has been amended as follows:

Claim 5 – A multicast source control method, comprising the steps of:

a. creating multicast source authentication information in a master multicast source authentication server;

b. ~~the master multicast source authentication server a management platform of the multicast source authentication information~~ dynamically updating said multicast source authentication information in accordance with a restriction on a multicast source;

c. controlling sending a multicast message from the multicast source in accordance with said multicast source authentication information,

wherein said multicast source authentication information is recorded in a tabular form; said multicast source authentication information table contains a corresponding relationship between a unicast ~~multicast source~~ address and a masked multicast address wherein said masked multicast address is a result of an AND operation on a multicast address contained in the table and an address mask;

wherein said step b further comprises: a plurality of slave multicast source authentication servers, in accordance with the multicast source authentication information in the a master multicast source authentication server, updating the

multicast source authentication information stored therein at a predefined period; when the multicast source authentication information in said master multicast source authentication server is changed, notifying said slave multicast source authentication server to update the multicast source authentication information stored therein; and wherein said step c further comprises:

c1. after receiving a multicast message sent from the multicast source, a predefined node initiating an authentication request to ~~the~~ a preconfigured slave multicast source authentication server thereof;

c2. said preconfigured slave multicast source authentication server performing a longest prefix matching with the multicast source address contained in the authentication request with ~~based on~~ the multicast address result in the multicast source authentication information table stored therein, and sending a response indicating whether the authentication request is successful to said predefined node according to the matching result, wherein:

c21. if the ~~multicast source~~ unicast address corresponding to the matched multicast address in the multicast source authentication table is identical to the multicast source address in said authentication request, sending a response indicating that the authentication request is successful to said predefined node; after receiving the response indicating that the authentication request is successful, said predefined node permitting said multicast message to enter into the multicast network;

c22. if the ~~multicast source~~ unicast address corresponding to the matched multicast address in the multicast source authentication table is different from the multicast source address in said authentication request, sending a response indicating that the authentication request has failed, to said predefined node; after receiving the response indicating that the authentication request has failed, said predefined node forbidding said multicast message to enter into the multicast network.

Authorization for this examiner's amendment was given in a telephone interview with Brain A. Carlson on July 20<sup>th</sup>, 2010.

***Reasons For Allowance***

3. Claim 5-9 are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record does not disclose, suggest, or provide motivation, singularly or in combination a method of determining access to a multicast network based on a preconfigured slave multicast source authentication server performing a longest prefix matching with the multicast source address contained in the authentication request with the multicast address result in the multicast source authentication information table stored therein address contained in the table and an address mask wherein there is a corresponding relationship between a unicast address and a masked multicast address wherein said masked multicast address is a result of an AND operation on a multicast address contained in the table and an address mask.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CHRISTOPHER T. WYLLIE whose telephone number is (571) 270-3937. The examiner can normally be reached on Monday through Friday 8:30am to 6:00pm EST.
